NEW HORIZON COLLEGE OF ENGINEERING

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING (DATA SCIENCE)

Event: Outreach Program on "Living with Technology"

Venue: Government High School, Gunjur.   **Time-12:00 PM to 4:00 PM**

On the 26th of November, an Outreach Program was conducted on **Living with Technology**. The talk was open to all the students of **Government High School, Gunjur.**

The outreach program, led by Ms. Ashwini GB and supported by 3rd and 5th semester students, offered a thorough introduction to the world of technologies and their applications in its initial segment. Designed to cater to individuals of all skill levels, the curriculum ensured that even beginners could grasp modern programming concepts. The participants' enthusiasm highlighted the program's success, as they eagerly absorbed knowledge and gained valuable hands-on experience in creating and communicating through emails.

Furthermore, the event drew participation from 170 students of **Government High School, Gunjur**. Our students insightful talk shed light on growing technology and cyber threats in modern world, providing the students with invaluable insights into the rapidly evolving technological landscape

Following the engaging session, our students encouraged interactive discussions, allowing students to delve deeper into the practical applications on **Living with Technology**. Through engaging questions and real-world examples, attendees gained a comprehensive understanding of how technology is transforming the future through innovation

In addition to the informative presentations, the outreach program also featured interactive demonstrations providing participants with an immersive learning experience. Under the guidance of **Prof.Ashwini GB**, students had the opportunity to know how to create email, how to deal with cyber threat, further solidifying their understanding of the concepts discussed during the sessions.

Furthermore, the event served as a platform for networking and communication, fostering connections between students and educators passionate about computers and its applications. Through group discussions and brainstorming sessions, participants exchanged ideas and insights, layingthe groundwork for potential future collaborations and projects in the field of data science.

As the outreach program drew to a close, participants were invited to share their reflections and key takeaways from the event. Many expressed their newfound appreciation for the intricacies of technolgy and its potential to drive innovation across various sectors.

Moreover, the outreach program sparked curiosity and inspired students to explore further opportunities in the field of Computer Engineering and data science . **Ms. Ashwini** along with the students has emphasized the

importance of continuous learning and encouraged attendees to pursue their interests in data science through academic studies, research endeavors, and practical applications.

In conclusion, the outreach program led by Ashwini GB along with the students, was a resounding success, providing students with a comprehensive introduction to Essentials of computer and its applications. Through informative presentations, interactive discussions, and networking opportunities, participants gained valuable insights and practical experience in this rapidly evolving field. As they departed, attendees left with a renewed enthusiasm for science and a firm understanding of its potential to shape the future of technology and society.
